CS23A34
USER INTERFACE
DESIGN EXPERIMENT-5

ROLL NO: 240701195
NAME: Iniyan V

Aim

To analyze how users track real-time Formula 1 car positions during a race and represent the interaction process using a user flow diagram in Lucidchart.

User Flow Description

1. App Launch

- **Start**
- **Open the app**
- **Connect to internet / data source**
- **Select race event (e.g., Bahrain GP)**

2. Race Selection

- **View list of upcoming or live races**
- **Select a race**
- **View race overview (track, teams, drivers)**
- **Tap "Track Live Positions"**

3. Live Tracking Dashboard

- **View real-time car positions on track map**
- **Display leaderboard (driver positions)**
- **View lap number and race time**

- **Select a driver/car to track**

4. Driver Details

- **Display driver information**
- **Show current position and lap time**
- **View telemetry or race stats**
- **Highlight car location on track**

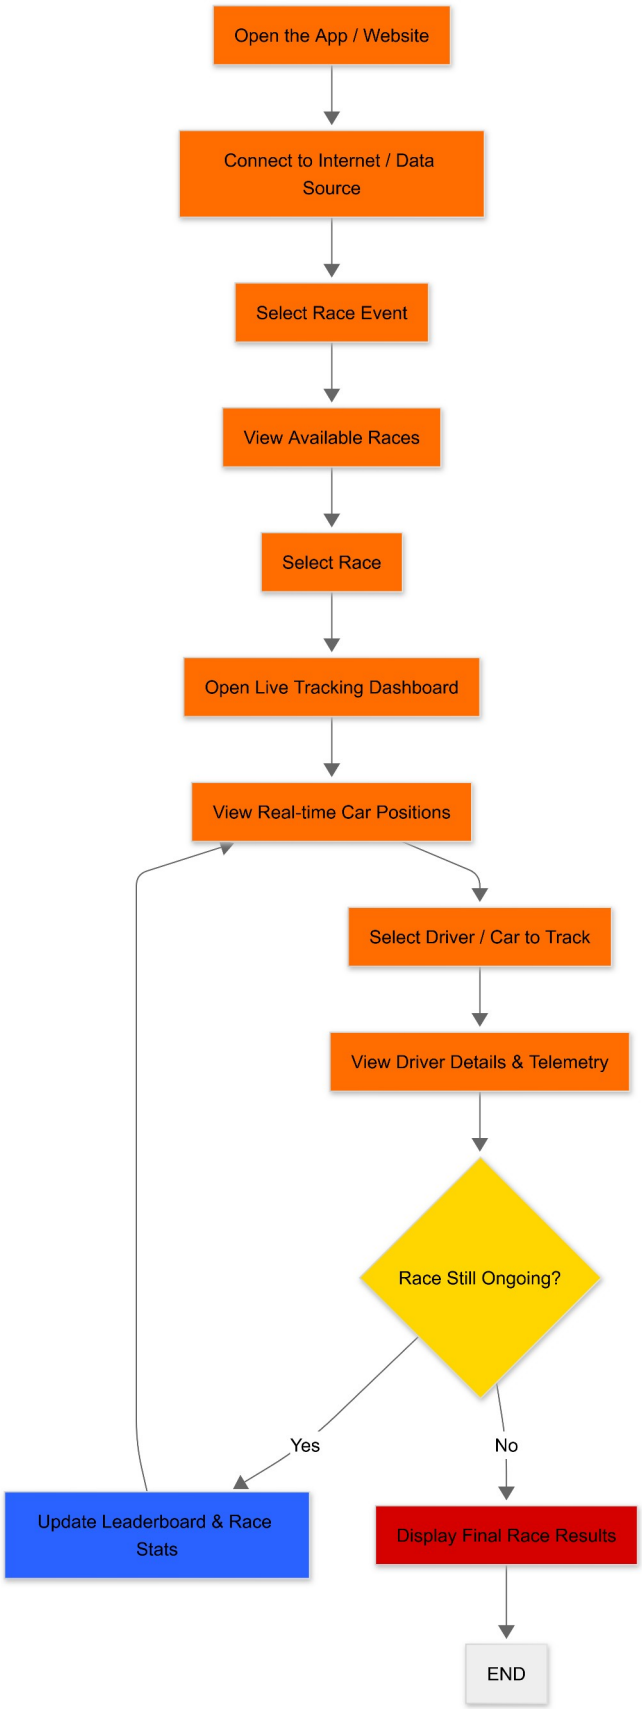
5. Race Updates

- **Receive live race updates (overtakes, pit stops)**
- **Update leaderboard automatically**
- **Show race completion status**

Conclusion

The experiment demonstrates how a structured user flow improves clarity and usability in an F1 car position tracking application. The organized flow allows users to easily select a race, view real-time car positions, and access driver details and race updates. Proper step-by-step navigation from race selection to live tracking ensures a smooth user experience and enables users to efficiently monitor race progress and final results.

FLOWCHART



Open the App / Website
Connect to Internet / Data Source
Select Race Event
View Available Races
Select Race
Open Live Tracking Dashboard
View Real-time Car Positions
Select Driver / Car to Track
View Driver Details & Telemetry
Race Still Ongoing?
Yes
No
Update Leaderboard & Race Stats
Display Final Race Results
END
